

# Aspen Aerogels V-Grooved Pipe Covering

## V-Grooved Pipe Covering for Small Bore Piping

### Precision Cut

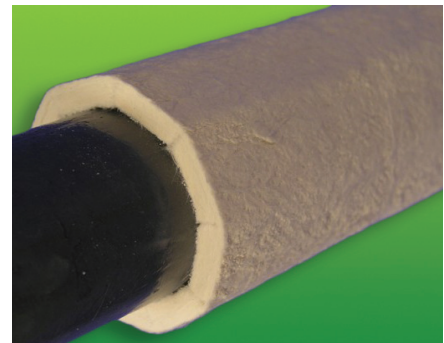

The rigid nature of Aspen Aerogels material does not allow it to conform well to small bore piping. SMC's V-Grooved Pipe Covering is cut with precisely spaced and angled 'V' grooves to allow the material to easily wrap around a small bore pipe. At the same time the precisely spaced and angled 'V' grooves completely close preventing heat loss.

### Available Materials

- Pyrogel XT (pictured)
- Pyrogel XTF
- Cryogel Z
- Available with factory applied Venture Clad
  - Smooth or Embossed Finish
  - 5 ply or 13 ply Thicknesses
  - Aluminum or select colors available

### Available Sizes

- Pipe Sizes: 1/2" ~ 3 1/2" NPS pipes
- Piece Length: 2.5' (.762m)
- Multiple layers can be combined to provide a system with thicknesses that exceed the standard single layer 5mm and 10mm material.\*

### Easy to Read Color Coded Labeling

- All pieces have color stripes on edge of material.
- The color of the stripe indicates the pipe size. (A color reference chart is included with each shipment.)

### Clear and Compact Packaging

- All of SMC's V-Grooved Pipe Covering is sealed in a clear poly bag and then boxed for maximum dust control.
- All bags and boxes are labeled with the quantity, pipe size, thickness, and layer number.

\* All aerogel patterns are cut to ANSI pipe standards. Due to material thickness variations, field adjustments may be required for proper fit, especially in multiple layer configurations.
