Buckaroo Pipe Insulation Supports

Description
A Buckaroo Support is a convenient wood dowel spacer for pipe insulation at hanger locations. The wood dowel is adhered to a PVC Disc, providing a one-piece support system with a built-in vapor barrier. The PVC Disc meets a 25/50 Flame/Smoke rating.

The Buckaroo Support Pipe Insulation System features the Easy-Grip Stainless Steel Hole Cutter, which requires a simple twist of the wrist and light pressure to make your hole in the insulation for the Buckaroo Support. ASJ Tape Discs are available to be applied over the PVC Discs for systems which require a complete vapor seal.

Features and Benefits
- Installation is quick, easy, and low-cost. Just cut your hole and insert the Buckaroo Support. The support can be installed after the pipe insulation is applied, versus cutting out for blocks or dowels before installation of the pipe insulation.
- Buckaroos Supports are excellent for chilled water piping.
- Buckaroo Supports fit especially well with vapor barrier systems because the PVC disc is also a vapor barrier. When used with ASJ tape discs, Buckaroo supports re-establish the vapor barrier.
- Buckaroo Supports are easy to identify. The contractor and engineer can view the PVC disc from the outside of the insulation and verify that there is a support in place.

Applications
Buckaroo Supports are used at hanger locations where the insulation must resist compression. Buckaroo Supports rest on the Buckaroo Insulation Saddle, which is installed between the insulation surface and the pipe hanger.

Buckaroo Supports can be used on piping when operating temperatures range from -120°F to +200°F. Buckaroo Supports work well with fiberglass, rubber, polyethylene, urethane, and mineral wool pipe insulations.

Guide Specifications
Wherever pipe insulation passes through a hanger location, install the Buckaroo Insulation Support System with Buckaroo Saddles. The length of the Buckaroo Insulation Support must be the same length as the pipe insulation thickness. The following table explains the number of Buckaroo Supports needed, based on the pipe size.

Recommended Installation Instructions

For chilled water, refrigerant, or brine piping, which requires a total vapor seal, an ASJ Tape Disc must be adhered over the outside of each Buckaroo Support to provide a complete vapor seal.

Buckaroo Supports should be installed from the outside of the pipe insulation after the insulation has been installed on the pipe. Buckaroos offers the Easy Grip Hole Cutter, which is perfect for the installation of Buckaroo Supports. After cutting the hole in the outside of the insulation, insert the Buckaroo Supports. If a complete vapor seal is required, apply an ASJ Tape Disc over the outside of the PVC Disc.

For iron piping that is 2 ½” and smaller, one Buckaroo Support per hanger is sufficient. Place it exactly at the base of the hanger as shown in Figure 1.

For piping 3” to 5 ½”, place three Buckaroo Supports in the lower 180-degree arc of the pipe, exactly at the hanger location, as shown in Figure 2. Three Buckaroo Supports are required to eliminate the possibility of large or heavy pipes teetering on the base of the Buckaroo Support.

For piping 6” and over, nine Buckaroo Supports should be strategically placed similar to the first three, as shown in Figure 3. They should all be within the length of the hanger protection saddle.
