Permacote Linacoustic HP is a flexible duct liner insulation made from strong glass fibers bonded with a thermosetting resin. The airstream surface is protected with Permacote®, a state-of-the-art acrylic surface coating system. The exclusive Permacote coating system offers exceptional durability in exposure to air velocity, as well as superior acoustical and thermal performance.

Factory-Applied Edge Coating
Edge coating is factory applied to the edges of the liner core, ensuring coverage of the leading edges per NAIMA/SMACNA requirements. Shop fabrication cuts may be coated with the SuperSeal® Duct Butter and Edge Treatment products (refer to publication AHS-202).

Uses
Permacote Linacoustic HP is specifically designed for lining sheet metal ducts in air conditioning, heating and ventilating systems.

General Properties
- Operating temperature (max.) – ASTM C 411 250°F (121°C)
- Air velocity (max.) – ASTM C 1071 6000 fpm (30.5 m/sec)
- Water repellency – INDA IST 80.6 ≥6
- Fungi resistance – ASTM C 1338 Does not breed or promote
- Fungi resistance – ASTM G 21 No growth
- Bacteria resistance – ASTM G 22 No growth

Advantages
- Improves Indoor Building Environment. Permacote Linacoustic HP improves indoor environmental quality by helping to control both temperature and sound.
- Withstands High Velocity. Permacote Linacoustic HP has been tested to the recommended maximum velocity of 6,000 fpm (30.5 m/sec). Fiber erosion test results were determined using the Isokinetic Sampling Method described in JM Fiber Erosion Testing Fact Sheet HSE-133FS.
- Absorbs Disturbing Sound. Permacote Linacoustic HP has exceptional sound-absorbing properties far exceeding the requirements of ASTM C 1071. Duct-transmitted noise, such as crosstalk and sound energy from air movement and mechanical equipment, is noticeably reduced.
- Conserves Energy. The unique glass fiberization process used in the manufacture of Permacote Linacoustic HP provides very good thermal properties.
- Resistant to Dust and Dirt. The tough acrylic polymer Permacote coating helps guard against the incursion of dust or dirt into the substrate, minimizing the potential for biological growth.
- Will Not Support Microbial Growth. Permacote coating is formulated with an immobilized, EPA-registered, protective agent to protect the coating from potential growth of fungus and bacteria.

Permacote Linacoustic HP duct liner meets all the requirements of ASTM C 1071 for fungi and bacterial resistance. Tests were conducted in accordance with ASTM C 1338 and ASTM G 21 (fungi testing) and ASTM G 22 (bacteria resistance testing).
Permacote® Linacoustic® HP
Fiber Glass Duct Liner

Detailed information is available in Johns Manville fact sheet HSE-103FS.

Note: As with any type of surface, microbial growth may occur in accumulated duct system dirt, given certain conditions. This risk is minimized with proper design, filtration, maintenance and operation of the HVAC system.

Cleanability. If HVAC system cleaning is required, the Permacote airstream surface may be cleaned with industry-recognized dry methods. See the North American Insulation Manufacturers Association (NAIMA) “Cleaning Fibrous Glass Insulated Air Duct Systems.”

Minimizes Pre-Installation Damage. The Permacote coating system has more than twice the toughness of the original Permacote. It effectively doubles the resistance to damage that can occur from in-shop handling, fabrication, jobsite shipping and installation.

Increased Resistance to Water. The Permacote airstream coating resists penetration of incidental water into the fiber glass wool core.

Easy to Fabricate. Permacote Linacoustic HP is lightweight and easy to handle. Clean, even edges can be accurately cut with regular shop tools.

Coefficients were tested in accordance with ASTM C 423 and ASTM E 795.

ISO 9000 Certification
Johns Manville mechanical insulation products are designed, manufactured and tested in our own facilities, which are certified and registered to stringent ISO 9000 (ANSI/ASQC 90) series quality standards. This certification, along with regular, independent third-party auditing for compliance, is your assurance that Johns Manville products deliver consistent high quality.

Friction Loss in Inches of Water per 100 Feet
* Permacote Linacoustic HP Liner airflow properties were tested with the material applied to galvanized sheet metal duct with mechanical fasteners in accordance to the SMACNA “Duct Liner Application Standard.”
**Permacote® Linacoustic® HP**

**Fiber Glass Duct Liner**

**Materials**

**Lining for Rectangular Metal Ducts.** All ducts, where shown on the drawings, shall be lined with 1” (25 mm) thick Permacote Linacoustic HP fiber glass duct liner with factory-applied edge coating or approved equal. The liner shall meet the Life Safety Standards as established by NFPA 90A and 90B, FHC 25/50 and Limited Combustibility and the airstream surface coating should contain an immobilized, EPA-registered, antimicrobial agent so it will not support microbial growth as tested in accordance with ASTM G 21 and G 22. The duct liner shall conform to the requirements of ASTM C 1071, with an NRC not less than 0.70 as tested per ASTM C 423 using a Type “A” mounting, and a thermal conductivity no higher than .25 Btu•in/(hr•ft•°F) at 75°F (.036 W/m•°C at 24°C) mean temperature.

**Material Handling and Storage.** Permacote Linacoustic HP shall be kept clean and dry during transportation, storage and installation. Care should be taken to protect the liner from exposure to the elements or damage from mechanical abuse.

**Application**

**Installation Recommendations.** All portions of duct designed to receive duct liner shall be completely covered with 1” (25 mm) thick Permacote Linacoustic HP. The smooth, black, acrylic-coated surfaces of the Permacote Linacoustic HP shall face the airstream. Permacote Linacoustic HP shall be cut to ensure tight, overlapped corner joints. The top pieces shall be supported by the side pieces.

Permacote Linacoustic HP shall be installed following the guidelines in the NAIMA “Duct Liner Installation Standard.”

Permacote Linacoustic HP shall be adhered to the sheet metal with full coverage of an approved adhesive that conforms to ASTM C 916, and all exposed leading edges and transverse joints shall be coated with Permacote factory-applied or field-applied edge coating and shall be neatly butted without gaps. Shop or field cuts shall be liberally coated with Johns Manville SuperSeal Edge Treatment or approved adhesive.

Metal nosings shall be securely installed over transversely oriented liner edges facing the airstream at forward discharge and at any point where lined duct is preceded by unlined duct.

When velocity exceeds 4,000 fpm (20.3 m/sec), use metal nosing on every leading edge. Nosing may be formed on duct or be channel or zee attached by screws, rivets or welds.

Permacote Linacoustic HP shall be additionally secured with mechanical fasteners spaced per the schedule shown in the diagram on the back page. The pin length should be such as to hold the material firmly in place with minimum compression of the material.

**Restrictions and Limitations of Use**

Fiber glass liner should not be used in the following applications:

- In air duct systems operating above 250°F (121°C)
- In systems conveying solids or corrosive gases
- Not closer to electric coils or gas heaters than indicated by equipment manufacturer
- In ducts operating at a velocity in excess of the liner’s maximum recommended velocity
- Precautions should be taken to keep liner from coming in contact with liquid water when it is installed within the first six feet (1.83 m) downstream from a fresh air intake, outside grille, in-duct humidifier or other source of water
- In contact with water drain pan or dehumidification coils

**Special Applications**

**Unconditioned Spaces.** All ducts located outside of the building or in other unconditioned areas may require a higher thermal resistance to prevent condensation or energy waste. 1½” or 2” (38 mm or 51 mm) Linacoustic® RC may be specified. (See data sheet AHS-329 for details.)

Metal ducts must be sealed to prevent moisture and dirt from entering the system.

**Special Noise Control.** In plenums or duct systems with severe noise conditions or more demanding acoustical requirements, use Permacote Linacoustic HP.

**Hospitals and Medical Facilities.** Duct liner can be used without any special application or installation requirements in duct systems serving general areas of the hospital. Duct liners cannot be used in duct systems supplying surgical suites, delivery rooms, intensive care units and isolation areas as listed in the American Institute of Architects “Guidelines for Construction and Equipment of Hospitals and Medical Facilities,” 1996-97 Edition.

Fiber Glass Duct Liner

Duct Liner Installation
When velocity exceeds 4000 fpm (20.3 m/sec), use metal nosing on every leading edge. Nosing may be formed on duct or be channel or zee attached by screws, rivets or welds. A metal nosing shall also be installed at the fan discharge and at any point where lined duct is preceded by unlined duct.
